

Reviewer-requested rigor checks for domain dependence and cell composition

Score-only clustering ignores author domain labels; marker adjustment is an audit, not deconvolution.

d Evidence status after reviewer-requested audits

Mechanical-border	Strong
Score-only recovery and adjusted margins remain positive.	
Fibroblast-scar repair	Strong tissue-state; composition-coupled
Domain 4 enrichment is robust but marker-sensitive.	
Immune-fibrotic	Moderate contextual
Related to scar repair and sensitive to adjustment.	
Human transfer	Feasibility only
Single human STEMI section; no outcome labels.
